

## VoCare Vitals360® Point Of Care

Integrated with PointClickCare. Give your team the benefit of PointClickCare's most experienced and widely used vitals integration. Experience successful implementation and adoption with hundreds of facilities across the USA. These are the ways in which VoCare Vitals360® PoC Vital Signs Solution integrates with PointClickCare: Retrieve real-time patient information from PointClickCare; read, monitor and submit patient blood pressure, heart rate, blood sugar, oxygen saturation, heart rhythm, temperature, or weight observation for a given patient directly in PointClickCare;

### VoCare Custom integration with PointClickCare EHR

#### POINT OF CARE (PoC)

Multiple times every day when you are in a hospital, and every time you visit a clinic, urgent care, or emergency room, someone takes your vital signs. In the hospital, the nurse pushes a COW (Cart on Wheels) down the hallway with devices to gather your vitals and upload them to the electronic chart. In clinics, they often take them manually and manually enter them, introducing potential transcription errors. VoCare's Vitals360® connects to electronic charts and easily uploads the data into the record, saving time and avoiding transcription errors.

The Vitals360® is less expensive than current solutions, easier to use, and works in all environments. The Vitals360® is an excellent solution for Point of Care, Remote Monitoring, and Telehealth. When used for all three, the synergies are amazing. An issue that every RPM company faces is training and support, particularly for those who use multiple connected devices. The Vitals360® obviously solves the multiple connected device problem. When deployed for all three use cases, it also solves the training and support issues.

#### Vitals 360® Solution

The Vitals 360® measures 6 key vital signs. -Heart Rate -Blood Pressure -SpO2 -ECG/EKG -Temperature -Blood Glucose (no FDA Clearance yet) -Weight (through an externally connected Bluetooth scale) It's like having a portable doctor's office in the home or anywhere. The VoCare Vitals360® connects to electronic charts and easily uploads the data into the record, saving time and avoiding transcription errors. The Vitals360® is less expensive than current solutions, easier to use, and works in all environments. Unlike other medical devices that require manual entry of data, the Vitals360 can be linked directly to the HIPAA-compliant VoCare Cloud via 4G LTE cellular and Wi-Fi connectivity to allow patient data to be automatically uploaded after every use.
