

The VoCare specialist portal is the heart of the VoCare RPM Platform. The portal allows for assigned nurses, doctors, technicians or caregivers to view assigned programs, view vital readings, update notes and define observations for each patient in your facility.

VoCare Vitals360® Specialist Web Portal

Specialist Web Portal Features

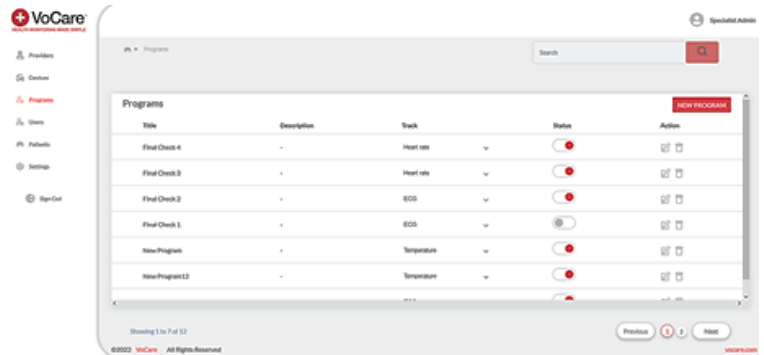

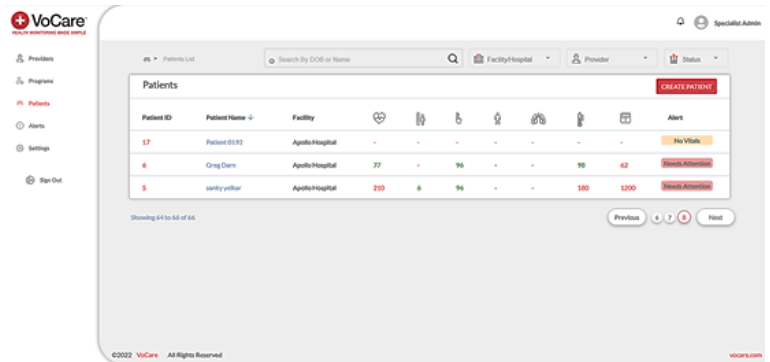

With the VoCare Specialist Web Portal a credentialed member of your team can assign patients to specific providers along with notes for the provider to see.

The team member can view all vital readings for each patient in the facility with notes and observations attached. The ability to view assigned programs and plans of action are also available.

The VoCare Specialist Web Portal allows for assigning program plans for care action and routines that a provider should follow for a patient.

The VoCare Specialist Web Portal allows for tracking progress of a patient's specific medical plan with the ability to take and share notes with other providers and facilities.

When a patient has been assigned a VoCare Vitals360® device the caregiver can use the specialist portal to easily assign the device to the patient; allowing the patient to simply log into the device with their date of birth upon receiving.

VoCare Specialist Portal RPM & Enterprise API Integration
